

Study Plan

Academic Background:

I completed my secondary education in Cameroon, obtaining the GCE Ordinary Level in 2018 at Amasia Bilingual High School and the GCE Advanced Level in 2020 at NESCAS High School. In 2024, I earned a Bachelor's degree in Information Systems Networking, which equipped me with a strong foundation in network technologies, cybersecurity, and hands-on experience with Cisco-based infrastructure.

Throughout my academic journey, I remained actively involved in both academic and extracurricular activities. My final internship at KNY GROUP as an Assistant Network Engineer helped me develop real-world skills in configuring routers and switches, managing VLANs, securing network ports, and ensuring full end-to-end connectivity. To further strengthen my knowledge, I am currently pursuing the CCNA certification at the High Tech Training Institute.

Motivation for Further Study:

I am deeply interested in continuing my education in Artificial Intelligence and Big Data, as these technologies are transforming the IT landscape and are increasingly relevant to modern networking, automation, and data-driven decision-making. My goal is to merge my networking background with AI to develop intelligent systems that can solve real-world problems efficiently.

In addition to my interest in technology, I am passionate about Sports Management and aspire to leverage data and digital tools to support performance analytics, event planning, and technological advancements in the sports industry.

Why China:

I chose China because of its impressive strides in technological innovation, research, and infrastructure. As one of the global leaders in Artificial Intelligence and Big Data, China offers a learning environment that aligns with my academic and professional goals. The longstanding cooperation between Cameroon and China in sectors such as technology, energy, and infrastructure further motivates my decision, as I believe this creates a pathway for knowledge transfer and impactful collaboration.

China's universities are well known for their academic excellence and innovation-focused training. Studying in this dynamic ecosystem will provide me with advanced skills, international exposure, and a global mindset.

Future Plans:

After completing my Master's degree, I intend to:

- Work on smart networks and AI-powered infrastructure solutions.
- Contribute to sports innovation through performance analysis and management systems.
- Launch training programs and entrepreneurial ventures to uplift young tech professionals in Cameroon.
- Play a role in enhancing national research and development capacity by integrating advanced technologies into key sectors.

By pursuing this degree, I aim to return to Cameroon with the tools and vision necessary to support the digital transformation of both the IT and sports sectors.
